

# TELMEX International IP VPN Services (MPLS)

- Telmex International IP VPN Services offers Carriers the unique opportunity to choose the quality of service ideal for their applications of: voice, video, critical data, transactional data and non-critical data.
- Carriers have the ability to manage their resources efficiently and based on their specific requirements and needs.
- Telmex International IP VPN Services provides Carriers with better business opportunities and lower costs in a secure, reliable and high performance environment. Additionally, Telmex provides Carriers with world-class support, outstanding performance and high reliability of the managed network.
- Telmex International IP VPN Services meets the Carriers' needs by providing the best cost/benefit solution for their telecommunications investments by providing the best performance.

Telmex International IP VPN Services adds the possibility of establishing 5 Classes of Service (CoS) and up to 28 profiles to the traditional interconnection between remote offices. By applying quality of service policies over the contracted bandwidth, the service is configured to ensure a minimum bandwidth for each type of traffic. In case of the incident of congestion, a different packet queuing policy is defined according to the Class of Service in order to assure that those applications sensitive to delay and packet loss, like those of voice and video, get the major priority in the transport network and maintain the performance level that they need.
